Description:

I've implemented display 002 in our training Web OPAC. According to previous information we had from you, the display of the field labels is governed by tab01.eng

However, the 002 displays for the records 004844611 and 004835712 show the labels "a010" and "a022" at the bottom of the display. Further up, they show the labels as defined in tab01.eng: "LC Control No." and "ISSN".

How do I get rid off these 2 displays?

Resolution:

You have expand_doc_extract as one of the operations in tab_expand for WEB-FULL. You aren't using the new fields created by this process (a010 and a020) in any of your views. If you remove expand_doc_extract from your tab_expand entry for the WEB views, they should disappear from this display.
