
p_cir_21 output report doesn't include today's transactions

Description:

In v.18 - Circulation Logger Report (cir-21) can be run for "In house use". The job consults the z309 circ log records with the z309_action = "30" (In House Use).

So far I couldn't make this work for in-house transactions. It always creates an empty report.

Example in USM50 (nyu-test):

- There is a single z309 record with the z309_action="30" (in house use);
- There is a single z35/event record with the z35_event_type="80" (in house use");
- Both records have been created by scanning item barcode through the "In house use" function in the Gui Circ client / Circulation menu;
- There is a dummy user with the user id "MED" which belongs to this item;
- p-cir-21 was run in USM50 (action = In house use);
- the job only consults the z309/cir-log table;
- The output file "cir-21-report" (/usm50/print/) doesn't contain any data.

Note 1: This problem could apply to other reports aside from "in-house-use".

Note 2: In the case where a a larger date range than just today is specified, the problem would manifest itself as "Today's transactions are missing from the report".

Resolution:

When the z309 transactions have been created on the same day as p_cir_21 is being run, then a "To Hour" **must** be specified. (Otherwise, the job defaults to "00:00" and the z309's for this day are ignored.)
