-

Desired Outcome Goal:

How to produce a report of an individual patron's overdue notices or the activities for a particular item.

Procedure:

The following SQL shows all of a particular patron's overdue notices (where "ID1234" is the patron ID):

```
> s+ xxx50
SQL> set heading off
SQL> set pause off
SQL> select z309_date_x, Z309_REC_KEY_3, Z309_DATA from z309 where Z309_REC_KEY like 'ID1234%' and
z309_action = '16' order by z309_date_x;
```

And this, all of the activity -- including overdue notices -- for a particular patron/item where "ID1234" is the patron ID and "000654321000010" is the z30_rec_key / z36_rec_key:

```
> s+ xxx50
SQL> set heading off
SQL> set pause off
SQL> select z309_date_x, Z309_action, Z309_DATA from z309 where Z309_REC_KEY_3 = '000654321000010' and
Z309_REC_KEY like 'ID1234%' order by z309_date_x;
```

Additional Information

The GUI "Circulation Log" function has transactions for all circ activities for all items a particular patron has (or had) on loan.

The cir-21 ("Circulation Logger Report") can be limited to a particular activity (such as "Overdue Notices") -- but that's for *all* patrons.

Category: Circulation (500)
