
How to turn the AZ header image into a link

- **Article Type:** General
 - **Product:** SFX
-

Desired Outcome Goal:

This can be used to add a link to the AZ header image, so that the image itself is a link to a website or page

Procedure:

Connect to the SFX server and enter the following directory containing templates for the SFX AZ:

```
/exlibris/sfx_ver/sfx4_1/<instance name>/templates/azlist_ver3/
```

Edit the template named head.tpl

(you will be asked if you wish to break the symbolic link of the file to the global instance, type 'y' and remember that you are now creating a local file that will not be updated automatically with future changes released by ExLibris)

Find the following line:

```
<IMG SRC="/<TMPL_VAR INSTANCE>-<TMPL_VAR _SFX_INSTITUTE>/a-z_banner.gif" BORDER="0" ALT="ExLibris header image">
```

And add the requested link in this format:

```
<a href="URL"><IMG SRC="/<TMPL_VAR INSTANCE>-<TMPL_VAR _SFX_INSTITUTE>/a-z_banner.gif" BORDER="0" ALT="ExLibris header image"></a>
```

Additional Information

Please notice that `` was added do the end of the line, and that the URL should start with 'http://'
