

How to set up External Services in GUI

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

We would like to use the External Services menu feature in the Aleph GUI, particularly in Cataloging for going to SFX. With a serial MARC record active, the SFX menu and SFX admin options go from greyed-out to black, but selecting them does nothing.

We do have the SFX settings entered in aleph_start. Do we need to edit catalog/tab/ext_srv.ini?

Resolution:

The key configuration on the client side was assuring that the Browser definition in the [Main] section of alephcom.ini was current and correct.
