## HTML Code from the Description Field Displays in the User Interface

- **Article Type:** General
  - **Product:** MetaLib
  - **Product Version:** 4
- 

### Description:

In order to highlight certain text in the user interface(V), the we entered HTML tags into the IRD > Presentation Primary > Description field.

The code displays correctly (that is, the result of the code displays, not the actual HTML) in all but 1 place.

The effect of the HTML code should be to highlight selected text about the resource and provide live, clickable links.

CORRECT

Find Database > Results > Table View

Find Database > Results > Table View > Database details/"i" click

Find Database > Results > Table View > Database details/"i" click

QuickSets > Search > Set Detail/click set name > Database details/"i" click (information display box)

Search Multiple Databases (= MetaSearch) > Search > Search Type = QuickSets > Database details/"i" click

Search Multiple Databases (= MetaSearch) > Search > Search Type = My Databases > Database details/"i" click

Search Multiple Databases (= MetaSearch) > Search > Search Type = Subjects > Database details/"i" click

Search Multiple Databases (= MetaSearch) > Search > Search Type = by Keyword > Database details/"i" click

My Research (= My Space) > My Databases > Clipboard > Database details/"i" click

INCORRECT

Find Database > Search in DB

### Resolution:

Using HTML code or tags in the Description field is a high priority Enhancement Request which is expected in next released version (4.3) at the end of March 2009.
