
p_file_03: excessive output files for z00p table

- **Article Type:** General

 - **Product Version:** 20
-

Description:

Why does the p_file_03 job create so many output files for the z00p table?

There are only 335,193 z00p records in abc50, but we already have 30 output files (z00p.seqaa - z00p.seqbd).

Resolution:

The Oracle z00p table is in CLOB format, while these sequential files are not. The z00p has the fields in xml format.

From z00p.seqaa:

```
<datafield tag="010" ind1=" " ind2=" ">  
<subfield code="a">2008008259</subfield>  
</datafield>
```

This is 87 bytes. The same tag in the z00 would be only 16 bytes.
