

Oracle error: update_cursor3 z601; invalid table name

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

We see this message in the pc_server log:

Oracle error: update_cursor3 z601

ORA-00903: invalid table name

Resolution:

We have seen (in version 16.02) that when this error occurs the `./alephm/source/acq/` directory contains a (defective) "get_order_enc_budget_years.cbl.enc" file.

Zippping, decrypting, and re-compiling this file generates a different (correct) executable in the `./aleph/exe/` directory.

Contact Ex Libris Support to have this done for you.

Additional Information

Oracle
