
830 Field for the scancode Table

Description:

Using sysno 676770 in Cataloging and the 830 field, I am trying to get that field to default to the ABC10 code of UTL - so when I do the CTRL+F3 and search headings I choose ABC10 with UTL. However, I get the "request is beyond last heading in access file".

I know other codes have been corrected and work so I am wondering if I have the scancode table wrong or is the tab11_acc table?

Resolution:

The following SQL shows that there are no ABC10 Z01 records with the index code "UTL":

```
SQL> select count(*) from z01 where Z01_REC_KEY like 'UTL%';  
COUNT(*)
```

```
-----  
0
```
