

p-print-11 is incredibly slow - is this normal?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

The p-print-11 is incredibly slow! Is that to be expected?
We are processing a file with 7952 lines starting at 9:46.
It is now 11:29 and the log is at the url from line 2151.

Resolution:

When p-print-11 is running, it doesn't lock the xxx01 library so users can still connect to the xxx01 in the GUI/Web which competes with the p-print-11 job for server processing.

If you tail -f the urls.log file - it's hanging on a particular URL.

Other customers who have reported this mentioned that the size of the file didn't necessarily make a difference in processing time - rather it depends on the system use at the time the job is running.
