
Browsing by BARcode is not allowed

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

Description:

Browsing by system number is possible, but we cannot browse by BAR

Resolution:

It is not possible to Browse by Barcode.

In ver. 17 and higher the misleading line in `pc_tab_sear.eng` is removed.

Only full barcode can be searched using the Find option.

In order to search with wildcards or Browse by barcode, you need to index the barcode separately as a new direct index (not system's BAR index or any variation of BAR, for example BAR2).

Browsing by System number (SYS) is OK.

In order to set up direct index for item barcodes do as follows:

- Define "expand_doc_bib_z30" in the INDEX section of `/usm01/tab/tab_expand`

- Set up a new index for item barcodes in `/usm01/tab/tab11_ind`, for example:

Z30-1 LLL 5

Z30-2 LLL 5

Note: See explanation on virtual fields Z30-1 & Z30-2 in `/usm01/tab/expand_doc_bib_z30`

- Set up a new index for item barcodes in `/usm01/tab/tab00.eng`, for example:

H LLL IND 21 00 00 Barcode

- Restart Library Batch Queue via Util C/3 (stop) and C/2 (start)

- Run direct index `p_manage_05` in USM01

Additional Information

barcode, BAR, browse,
