Question

Why is the content of z13u (defined in the setup of xxx50/tab/tab22) not displayed in the report ret-adm-01?

Answer

The data of z13u, displayed in the report ret-adm-01, corresponds to xxx01/tab/tab22.

It's the service manage-07 that fills xxx01.z13u.

In the help of manage-07, we can read:

To create short bibliographic records in the administrative library, the tab_expand table of the administrative library must contain the following line:

```
CREATE-Z13 expand_doc_adm_bib
```

Category: Cataloging (500)

Subject: Services
