## Is there any limit on the size of tab37?

- **Article Type:** General

### Description:

I'm about to make some changes to tab37, giving faculty an extra pick up location option. Our table is getting rather long, nearly 350 lines, so before I add many more, I thought I should ask whether there's any size limitation on this table.

I could probably do it in a way that only adds 3 or 4 lines if necessary. But if it's not a problem, I will likely add 4 lines per sub library.

### Resolution:

tab37 is a bit fuzzy. There are no references to tab37 in the Cobol programs.

The ./com\_c/tab37.c program has this line:

```
static int tab_no_lines[100];
```

which would seem to indicate a 100-line limit, but if that were the case, your current 350 lines would not be working....

{ Note: The tab37\_bk\_pickup \*does\* have a clear limit. This line in ./alephm/source/TAB37\_BK\_PICKUP:

```
01 TAB37-BK-PICKUP-MAX-LINES PICTURE 9(9) COMP  
VALUE 200.
```

But I see that your tab37\_bk\_pickup has just a single line, so that is not a problem. }

I guess you will just need to try it.
