

## Print Forms Require Print Button Click for Each Slip

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

In a previous version, we could click print once and a file of several hundred slips would print out as individual prints.

Now, using the Task Manager, when we try to print a file we cannot see an option to print all slips. We can cancel all, and close all, but cannot figure out how to print all.

### Resolution:

This is a Task Manager setup issue. Open the Task Manager and click on your file to select it. Note at the bottom of the window, there is a dropdown box labeled "Print Setup". It probably has a "Y" showing. If you change that to "N", then your forms should print without operator intervention.

If you want to change this to "N" by default, go to `alephcom/tab/alephcom.ini` and do a find on "PrintSetup". Setting "PrintSetup=N" will mean that the default is to print without the Print Dialog.

It is a "sticky" setting and, after it is first changed in the GUI, will remain at your last selection until you change it again.
