## p\_cir\_11: Sorting by sublibrary, collection

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

---

### Description:

We want to be able to sort reports such as p\_cir\_11 by sublibrary (then collection, then call number): \$\$b, \$\$c, \$\$h, and \$\$i.

### Resolution:

The problem is that there is only one z101 per title. Thus, the report can be sorted by only one sublibrary. So, in the case where there are multiple sublibraries, only the first would be represented.

What sites normally do is to sort on \*call number\* only: \$\$h, \$\$i.
