Question

How can we tell where Aleph is pointing for PDS?

Answer

The following on the command line of the Aleph server shows the PDS_HOST and PDS_PORT:

```
> env | grep -i pds
```

Additional Information

* These values are set in \$alephe_root/aleph_start :

```
setenv PDS_HOST aleph.xxx.edu  
setenv PDS_PORT 899n
```

* After changing them,apache and the www
