

p_manage_18: override indexing priority

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

The help screen for p_manage_18 indicates an option to override indexing priority. We don't see this option/parameter in our version 20 p_manage_18 form. Should it be there?

Resolution:

When I look at the v20 p_manage_18 submission form on our server, I see the Override Indexing Priority (immediately after the "No. of Catalogers Currently Working").

This means that the ./a20_1/aleph/pc_b_eng/p-manage-18.xml form contains this parameter. Since you don't see it, that means that you must have an (old) ./u20_1/alephe/pc_b_eng/p-manage-18.xml file which is taking priority.

You need to either update this ./u20_1/alephe/pc_b_eng/p-manage-18.xml file to include the Override lines or delete the file -- in which case the ./a20_1/aleph... p-manage-18.xml will be used.
