

## Circulation logger report

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

There is a report "circulation logger report" on the Circulation client. Can you tell me the name and location of the sql script this report is based on?

### Resolution:

The job which produces the Circ logger report is p\_cir\_21. It doesn't use SQL. It executes the ./butil/b\_cir\_21\_a and b\_cir\_21\_b Cobol programs.

These programs read the z309 Circ logger file.
