

## p\_manage\_17 seems to be stuck, won't finish.

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

The sys01 p\_manage\_17 was going OK for about an hour (one thousand headings per second in each process), but has now slowed to 500 headings/minute.

### Resolution:

util a 17/14 for sys01 showed that the z01 Oracle indexes were missing. Killing the manage\_17 processes, building the indexes (util a/17/2), and re-running p\_manage\_17 resolved this problem.
