Description:

Voyager 7: WebVoyage: How to display title from TALL search

In the WebVoyage classic interface, the title displayed in the resulting Title List by default. Because of this default display, many customers removed Title from the TALL search results. The new UI for WebVoyage (beginning in Voyager 7) no longer displays a default index for the TALL search titles page, thus TALL search results show no title.

In order to have titles display on your TALL search results page, go to SysAdmin > Search > Index Composite > TALL > edit > Search Results tab.

Then add Title Long, or some variation of title to the TALL search results and click on Save.

For changes in SysAdmin to be reflected in the new UI for WebVoyage, tomcat will need to be restarted.

Resolution:

Additional Information

TALL WebVoyage SysAdmin Title Voyager
