
file-90 (Advanced generic vendor loader): order without sub-library

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We create orders for our records, but not items or holdings.

tab_loader has "0" in col.4 and 5 (item and holding), and "1" in col.7 (order).

As a result, order is created, but there is no sub-library in the order record.

In tab_loader_def we have the sub-library set for the z68 order:

```
Z68-SUB-LIBRARY ##### WID
```

Resolution:

It turns out that although item is not created, the Z30-SUB-LIBRARY line must be present in tab_loader_def:

```
Z30-SUB-LIBRARY ##### WID
```

otherwise order is created with empty sub-library.

Additional Information

file-90, order
