
How to setup "Total Delete" option in Cataloging module

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

I am trying to setup the "Total Delete" option in the Cataloging module (under Record Manager). The Staff User Guide for v.17 indicates that a site can configure Aleph to use this functionality, but I cannot find this information in either the Staff, Systems Librarian, or Systems Administrator User Guides. Can you point me to the documentation that explains how to configure Total Delete?

Resolution:

You can control whether the warnings are overridable or not in `check_doc_mandatory`. Here are the lines from your table - those with M in column 3 are ones which cannot be overridden:

```
NAV-MAP-DELETE 0011 T ADM record $1 in library $2 points to current document with link type $3
NAV-MAP-DELETE 0012 M HOL record $1 in library $2 points to current document with link type $3
NAV-MAP-DELETE 0013 T BIB record $1 in library $2 points to current document with link type $3
NAV-MAP-DELETE 0002 M Document has item(s) attached to ADM record
NAV-MAP-DELETE 0004 M Document has order(s) attached to ADM record
NAV-MAP-DELETE 0006 M Document has subscription(s) attached to ADM record
```
