### Description:

Our PWD50 tab\_z105 has nothing in it.

I've seen mention of z105 in regard to SDI. Are there other reasons why we might want to be using the z105 MESSAGE\_LIBs things?

Are there things that happen regularly which I'm not aware of, or would an empty table simply indicate that we are not using it?

### Resolution:

There are two uses of z105 messaging by North American libraries:

a) type 4 (authority-to-bib)

b) type 8 (ADM-to-bib, for SDI). See KB 8540, 16.02 rep\_change 703, for details on SDI messages. Since pwd50 is a pw\_library / usr\_library -- not an ADM library -- there are no z105 messages relevant to it and it is correct for its tab\_z105 to be empty.

See KB 5741 for a general discussion of the z105.
