
Circulation statistics by call number range

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

Is it possible to get reports of circulation by LC class, such as sciences - Q-R?

Ideally by patron status and period of time.

Resolution:

This is not one of the p_cir_30 General Circulation Statistics reports.

The following SQL can be used to get this information:

```
s+ abc50
```

```
abc50@ALEPH18> select z35_bor_status, count(*) from z35 where z35_rec_key in (select substr (z30_rec_key,1,9) from z30 where z30_call_no > '$$hQ' and z30_call_no < '$$hS') and z35_event_type like '5%' and z35_event_date > '20071001' group by z35_bor_status;
```

Note: the z35_event_type's 50-59 are all loans.

Though I don't see it as one of the canned ARC reports, it could no doubt easily be created and formatted in ARC.
