
p_manage_21: "Undefined variable"; no updates occur

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

A p_manage_21 job has been in the abc01 util c/1 list of jobs for days. The job log has:

```
$aArendt: Undefined variable.
```

and there is no "end" statement as there is in other p_manage_21 logs.

Resolution:

util c/1 and "ps -ef | grep manage_21" show that the job is no longer running. The problem (as seen in the \$alephe_scratch/abc01_p_manage_01 log is the:

```
setenv p_match_text "$aArendt Hannah"
```

This should be either "\$\$aArendt Hannah" or plain "Arendt Hannah", but **not** \$aArendt Hannah".

The system treats the "\$aArendt" as a variable -- that's why you get the "Undefined variable".
