## Is tab\_file\_aut still functional?

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Question

Is tab\_file\_aut still functional? If so, can it be updated via GUI ALEPHADM?

### Answer

Though the ./com\_c/tab\_file\_aut.c program still exists in version 21 (and is called by pc\_job\_12nn programs), this table was made "obsolete" in versions 16 and 17. (See rep\_change's in Additional Information.)

It seems that, despite these rep\_change's, tab\_file\_aut \*can\* still function. If its presence seems to be causing a problem, rename/delete the file. Otherwise, though the table could be included in the ADM library and updated via "vi", it can \*not\* be updated via the GUI ALEPHADM.

---

### Additional Information

v16.2 rep\_change 000096 and (v17) rep\_ver 006096 say:

-----  
Description: tab\_file\_aut in the XXX50 library has been removed.  
It has not been functioning as originally intended at least since version 14.2. Possibly it never functioned.

Reference to tab\_file\_aut has been removed from UTIL G/4/d and from WEB Guide Task Manager. Header for the table has been removed.

Removed reference to tab\_file\_aut in tab\_alephadm.eng.

See Article 4228 ("Files with extensions do not display in ADM GUI Upload/Download files utility") in regard to inability to download tab\_aut via file utility in version 21.
