## ITMH: unwanted subfields/codes included

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

After the sublibrary-name and the collection-name the ITMH field, specified in edit\_doc\_999.eng, includes the entire 852 field: the nuc code, the sublibrary and collection codes, the call number, and all the notes (including the \$x internal note!). We want just the call number.

### Resolution:

Your ./xxx01/tab/edit\_doc\_999.eng line looks like this:

```
SE ITMH L LHoldings ITMH Y E W
```

This means that you are specifying "L" as the edit-field ID.

The field which the program uses for ITMH is the 852, \*not\* the ITMH.

Thus, in the ./xxx01/tab/edit\_field.eng you need to include the h,i,j,k as fields for the 852 field with edit-field ID "L" (column 4 with a value of "L".)

---

## Additional Information

ITMH, 852 field, call number
