## Tons of z07s from ABC50

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

Our prod z07 count has tripled in the past hour and is now over 100,000. As far as I can determine, they are all z07\_history like 'ABC%' and from today. Is there a way to figure out what process they're from? I don't see anything in today's batch logs from abc01 or abc50 that can account for them. I did get a report a couple of hours ago that changes to records in abc30 weren't showing and found that abc50's ue\_01 wasn't running, so I started it.

It seems like z07s are processing, but the increasing count is a bit alarming.

### Resolution:

The sequence was this:

Monday 6 AM: abc50\_p\_manage\_40.07897 was run with chgbib\_abc50 as its input file. chgbib\_abc50 has 112,026 abc50 rec-keys. This generated 112,026 abc50 z07s.

Tuesday 12:00: the abc50 ue\_01 was started. It wrote an abc01 z07 for each abc50 z07.

Tuesday 14:06: the abc50 ue\_01 finished processing the 112,026 abc50 z07s.

The count of abc01 z07's is now down to 91,000. The abc01 ue\_01 should be done processing them sometime tomorrow morning.

See KB's 8192-2743 and 4093 for diagnostic methods.
