## Monitoring VIR01

- **Article Type:** General
  - **Product:** MetaLib
  - **Product Version:** 4
- 

### Description:

I would like to monitor VIR01 to prevent space problems. How can I do this?

### Resolution:

Firstly, as a rule, make sure to clear the temporary library daily as a cron job. This will prevent problems.

You can monitor the temporary library space usage using UTIL-O-14-1. First make sure to dlib to vir01 with the command:

```
>>dlib vir01
```

Then enter the command: util o

select 14 and then select 1.

Pay attention to the free space of TS0 and TS1. You should see an output similar to this:

```
TABLESPACE_NAME TOTAL_FREE_SPACE MAX_EXTENT NUM_FREE_EXTENTS
```

```
-----  
DRSYS 75.6665649 74.978687 2  
SYSTEM 34.5814962 34.5814962 1  
TOOLS 273.650321 273.650321 1  
TS0 284.1429 874.417832 59  
TS1 96.1778321 71.9770382 12  
UNDOTS 506.403176 485.204031 22  
TEMP 960.527634
```

If there is less the 100 M free for TS0 or TS1, as you can see above, the tablespace should probably be extended. Contact your local support office.
