
Browse External Headings - Z39 target

- **Article Type:** General
 - **Product:** DigiTool
 - **Product Version:** 3
-

Description:

Everything is configured properly server-side and I can connect to my Z39 gate target, however, I can't seem to be able to use the target as a Browse External headings target when cataloging in the Meditor. Why?

Resolution:

1. In the admin unit you want the browse external headings configured for e.g.
/adm01/md/descriptive/<dc or marc>/scancode.dat

Add new entry column for the new target code (TARGET) followed by UTIL-K-1 to repackage the md type which you chose (DC or MARC)

e.g.

```
LOCAL ALEPH_Z39 OXFORD TARGET  
creator AUT AUT AUT  
title TIT TIT TIT  
alternative TIT TIT TIT
```

[2.In:](#) \COMMON\TAB\SEARBASE.dat (on your local client PC for Meditor install)

add a line that looks something like this:

Target Name TARGET EXT01

3. Connect to Meditor and Admin unit which the browse is configured for and browse headings in the new target.
