
VoyagerInstall.msi: no GDC flag for EIS_APP=

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 8.2.0
-

Description:

Bug Report for Issue 16384-17841

Module: Client install / GDC

Release replicated in: 8.0.0-8.1.x

Expected results: When installing Voyager clients, GDC would be an option for a custom install.

Actual results: There isn't an alphabetic flag for GDC when doing a custom install with the .BAT file method.

Workflow implications: GDC cannot be installed with .BAT file method.

Other information: .BAT file method was not included in the 8.x Technical User's Guide. A separate issue has been submitted for this.

Workaround: Install GDC separately on selected workstations after initial install of other Voyager clients.

Resolution:

Fixed in the Voyager GUI clients for 8.2.0.
