
VOY: Encrypt=Y doesn't work on fresh install

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7.0.1
-

Description:

Bug Report for Issue 16384-3105

Module: Clients

Release(s) replicated in: 7.0.1

Functionality lost from version: 6.5.4

Server platform(s) affected: N/A

PC OS (if PC specific): XP

Expected Results: Client encryption works.

Actual Results: Clients can't find voyutil.dll to handle encryption.

Workflow Implications: Insecure.

Replication steps: Install Voyager clients on a clean PC with no previous install. Set Encrypt=Y in voyager.ini and attempt to connect to a server with Encrypt=Y with Circulation. You will see an error: "Unable to encrypt data on client".

Workaround: Copy voyutil.dll to [C:\Windows\System32](#) or add the Voyager System directory to the PATH environment variable.

Resolution:

Fixed in the Voyager clients install for 8.1.1.
