

## Voy/Primo: timestamp missing from Primo extract logs

- **Product:** Voyager
  - **Product Version:** 8.2.0
- 

Issue 16384-18801

Module: Voyager-Primo interoperability / Primo extract

Expected results: Voyager's extract logs for Primo would have timestamp in addition to datestamp, like log files for other Voyager batch jobs.

Actual results: Primo extract logs have datestamp without timestamp.

Workflow implications: Not easy to identify when an extract ran, especially if multiple extracts run on one date.

Resolution:

Fixed in Primo Extract for 8.2.0.
