
opacjob: search log: hyperlink always = 'N' when should be 'Y'

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7.2.0
-

Description:

Date: January 5, 2010

Module(s): WebVoyage

Server platform(s) affected: Tested on Solaris

PC OS (if applicable): N/A

Browser & version (if applicable): N/A

Release(s) replicated in: 7.2.0

Expected results:

The Hyperlink variable of the OPAC_SEARCH_LOG table would indicate whether or not a particular search was the result of clicking a hyperlink (i.e. a redirect search)

Actual results:

The Hyperlink variable of the OPAC_SEARCH_LOG table is always NULL

Workflow implications: Customers reviewing the OPAC search log will never be able to tell if a search was a redirect search.

Replication steps:

- 1.Ensure that OPAC Search Logging is enabled in /m1/voyager/xxxdb/ini/voyager.ini, LOGSEARCH=Y
- 2.In the OPAC, search for history
- 3.Pull up any record that has something in the Subject fields
- 4.After viewing the record in step 3, click on any of the subjects or the author to establish a redirect search (you may need to enable these in displaycfg.xml)
- 5.Log onto the server, and run the following query in SQL: select search_date, search_string, hyperlink from opac_search_log;
- 6.The results of this query will show that these searches do not have the proper value logged for Hyperlink.

Resolution:
