

## Which files on my Voyager server have been edited lately?

- **Article Type:** General
  - **Product:** Voyager
- 

### Description:

Which files on my Voyager server have been edited lately?

### Resolution:

There is a handy UNIX command one can use to figure out which files have been modified on your Voyager server over a specified number of days. Knowing which files have been recently modified may provide a lot of clues when things go wrong with Voyager.

### The command is:

```
find <directory> -mtime -x (where 'x' equals number of days) -print
```

Ex:find /m1 -mtime -2 -print

The command will search the entire /m1 directory and all sub-directories for files modified in the past 2 days.
