

p_manage_32: "All" checkbox

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

Does the "All" checkbox option in p_manage_32 include all those definitions in tab_base.eng, or does it refer to all those that are configured to use z0102 at column 8 of the table?

When we run the job for the first time, do we need to select the "All" option, and choose the "rebuild counters" option?

Resolution:

When running p_manage_32 for the first time, you should specify "All".

The "All" option refers to all the bases which have "Y" in column 8 of tab_base.eng. Bases which have "N" will be ignored by p_manage_32.

Note: In previous versions, there has been a problem with "All" not working in the GUI submission while "ALL" does. In version 18-up, at least, the "All" which you see on the submission screen is converted to "ALL" and appears that way in the submitted job. If you are submitting the job from the command line, you should specify "ALL".

Yes, you should specify "rebuild counters".
