Description:

How do I control which SFX link button is displayed in the OPAC banner?

Resolution:

Which SFX link button is shown in the OPAC banner is controlled by using the table tab_sfx. If, according to this table's setup, the required services can be supplied by SFX, the SFX link button is displayed. If the required services can not be supplied by SFX, a different link is displayed. That way, the SFX link does not have to be launched in order to see if the required services can be supplied.

Additional Information

SFX button, Web OPAC, tab_sfx
