
How to access external links in z39.50 base

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 18.01

Description:

How come when I am in a z39.50 base in web OPAC I can not access web sites via the 856 external link? I find a record which has an 856 field, but then when I click the 856 field I get "error: not found".

Resolution:

Do as follows:

Replace current 856 line in \$ext01_dev/ext01/tab/edit_doc_999.eng with this line:

```
## 856## D LElectronic Location Y M E W
```

Then, backup in ext01 the file \$data_tab/edit_field.eng and \$data_tab/tab_service and then copy them from usm01. Also copy the files tab_buf_z403 and tab_type_config.eng from \$data_tab of usm01 to data_tab of ext01.

It can be done as follows:

```
cp -p $ext01_dev/ext01/tab/edit_field.eng $ext01_dev/ext01/tab/edit_field.eng.orig  
cp -p $usm01_dev/usm01/tab/edit_field.eng $ext01_dev/ext01/tab/  
cp -p $usm01_dev/usm01/tab/tab_buf_z403 $ext01_dev/ext01/tab/  
cp -p $ext01_dev/ext01/tab/tab_service $ext01_dev/ext01/tab/tab_service.orig  
cp -p $usm01_dev/usm01/tab/tab_service $ext01_dev/ext01/tab/  
cp -p $usm01_dev/usm01/tab/tab_type_config.eng $ext01_dev/ext01/tab/
```

You should also add the following two lines to ext01 \$data_tab/tab_expand

```
WEB-FULL expand_doc_bib_loc_disp  
WEB-FULL expand_doc_type tab_type_config
```

Additional Information

external links, z39.50 base
