Description:

I see in v18 rc 1224: "When tab_locations table was loaded into the Oracle table Z124, incorrect UTF characters were loaded as well. This has been corrected."

What is z124 and where is it documented? We haven't implemented a z124 Oracle table and wonder if this is something we need to do.

Resolution:

z124 is the Oracle Location Table used in Union Catalog functionality (xxx90). The document that describes its structure, use, and loading is 'Using the Location Table'. You can get it on the Documentation Center under How To/Cataloging.
