

Add Columns to Table View of Results List

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 4
-

Description:

It appears that we cannot add columns to the table view. The view is controlled in 2 places - www_tab_short.eng table and in the html page quick-3-body (section body-table-1).

There are currently 7 columns in www_tab_short.lng - each one reflected as a place-holder in quick-3-body - is it possible to have more than 7?

There is also a problem in the table view: once you remove a specific column (other than the action column) a display problem will appear. The Action column will display without icons and the icons will be in an orphan column.

Resolution:

New Issue 20222 : Add columns to results list (Table view), Sep-2008

This issue is still open and was escalated to Development for further investigation <2008-12-21 01:00:04>.
