Description:

What index tables are updated immediately when a bib/authority record is saved to the server?

What index tables are updated only later, by the ue_01 indexing daemon?

Resolution:

The following Oracle tables are updated immediately (by update_docx) when a doc record (bib, adm, hol, authority, or Course Reserve record) is saved to the server:

z00, z00r*, z07, z11, z13, z103, z105, z120 and z127**.

* The z00r is updated only if you have CREATE-Z00R in the library's tab100 .

** The z120 and z127 are updated only if the library's tab100 has UNION-LIBRARY = "1" or "2".

For an authority record, the z01/z02 is also updated immediately.

The following Oracle tables are read by the bib ue_01:

BIB: z00, z07, and z103

HOL: z00 (via expand);

ADM: z00 and z30 (via expand).

The following tables are updated by the bib ue_01 (and by the adm, hol, authority, and Course Reserve ue_01):

z07, z01, z02, z0101, z0102, z11, z13, z00r, z101, z103, z105, z120, z91*, z95, z97, z98, z00**;

* the z91 is relevant only to the ADAM function (not used by North American libraries)

** the bib z00 record is updated in the case where the authority record connected to an ACC heading does not have a UPD=N field.

(Note that the z00r, z07, z11, z13, z103, z105, and z120 are updated by both update_docx *and* by ue_01.)
