

Archiving Voyager Record Deletion Files

- **Product:** Voyager
 - **Product Version:** 8.2.2
-

Question

How to archive deleted.bib.marc, deleted.auth.marc, deleted.mfhd.marc and delete.item files located in /m1/voyager/xxxxdb/rpt/?

Answer

1. Locate deleted.bib.marc, deleted.auth.marc, deleted.mfhd.marc and delete.item in /m1/voyager/xxxxdb/rpt/ on the Voyager server.
2. Rename each file you wish to archive to its archived file name (i.e. [deleted.bib.marc.yyyy.mm.dd](#)) using the command: mv [original file name] [new file name]
3. A new file will be created the next time a record of that type is deleted in Voyager.

Best practice is to check deleted record file sizes regularly and rename the files before the filesize reaches the Voyager 2 GB filesize limitation.

Additional Information

See also [How can daily record deletes be captured for Summon or Primo?](#) and [Why do we have so many record delete files in our /rpt directory?](#) for information on how deleted record files are handled by Primo.
