
Deleted Resources Still Counted as Belonging to Quick Set

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 3
-

Description:

If an information resource is deleted via the /M interface, it is still counted as "active" when determining the number of resources associated with a specific QuickSet. While the system doesn't display the deleted resource anymore, the counter is not updated automatically.

Resolution:

The workaround for this situation until this is fixed is to re-create the problematic QuickSet.

An issue is opened for the Development, so that in the future deleted resources will be treated as inactive ones.

Additional Information

Quick Sets, Deleted Resources, Inactive
