

Preventing ue_06 (and other ue's) from starting.

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

We want to prevent ue_06 from starting. We commented out the ue_06 lines in aleph_startup, but it restarts anyway.

As described in KB 16384-11025, we will comment out the line in aleph_start.private, but we don't understand why commenting out the ue_06 lines in aleph_startup didn't work.

Resolution:

Any batch job which locks a library executes \$aleph_proc/unlock_library when it is done.

The unlock_library proc has a series of lines like this:

```
source $aleph_proc/util_e_01
...
source $aleph_proc/util_e_08
...
source $aleph_proc/util_e_06
etc.
```

You need to change the line in aleph_start.private, as described in KB 16384-11025.
