
Page break after each BIB when printing bibliography with p-print-01

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Desired Outcome Goal:

I would like to print a collection of titles and only one title appears per page.

I'm printing with "Print Catalog Records - Custom Format (print-01)" which uses the form print-bibliography.xml.

The bib data is formatted via edit_field.lng, edit_paragraph.lng and edit_doc.lng.

How can I achieve a page break after each title? I only find the possibility of a line break using DISP ##.

Procedure:

To achieve a page break after each title, you must modify the print template as follows:

print-bibliography.xml:

```
..
<!--SECTION-02 (FREE)-->

<xsl:template name="section-02">
<xsl:call-template name="table-start-row"/>
<div style="page-break-after:always"> << add opening <div> tag here
<xsl:for-each select="/*">
<xsl:call-template name="bib-info">
<xsl:with-param name="line" select="node()"/>
</xsl:call-template>

</xsl:for-each>
</div> << and close it here

<br/>
<br/>
<xsl:call-template name="table-end-row"/>

</xsl:template>
..
```

Note: You will not see the change in preview mode, but in normal printing it will come out as separate pages.
