
Are util_a13_b job and z34 table necessary?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Description:

Our util_a13_b job is interfering with other batch jobs. Do we need this?

Resolution:

util_a_13_b does "Drop Statistics Table (z34)".

As described in KB 8192-2130, the \$pw_library z34 OPAC transaction file is obsolete. And, as described in KB 4017, the z34 is no longer used for pc_server transaction reports.

We suggest changing the following line in *both* \$alephe_root/www_server.conf and ./pc_server_defaults from:

```
setenv create_statistics Y
```

to:

```
setenv create_statistics N
```

to prevent z34 records from being written.

Then you can remove the entry for util_a_13_b from the job_list and do util a/17/1 for the \$pw_library z34 table to drop the records which are there and free up the space.
