
Startup order for Oracle, Apache, and ALEPH

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

Is it important where Apache falls in the start/stop order?

We can see that Oracle has to be started before ALEPH and stopped after ALEPH, but does Apache also have to come before ALEPH in the start order?

Resolution:

In shutting down, Apache should be stopped first, then ALEPH, then Oracle. The start-up should be the opposite: Oracle, then ALEPH, then Apache.

Additional Information

Oracle, Apache, ALEPH
