Description:

When a user sent selected records via email from the web OPAC to multiple recipient, is there a limit on the number of recipients addresses? Or is there a limit on the number of characters in that field? The reason why I am asking this question is that I have got a report from a user that when he sent selected records to multiple recipients, some recipients listed at the end failed to get the records sent.

Resolution:

There is a limit of 80 characters on the e-mail address field. Anything after that will be lost. If an address spans the 80th character, it will be truncated at the 80th character (e.g. "sammy.sosa@chicago-cubs.com" could become just "sammy.sosa@chi").
