

## GUI login for access to USMnn demo data

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
- 

### Description:

What is a valid user name and password for the Aleph client using the aleph temp database that is part of the initial installation?

I want to login to do some quick testing before we start customizing things as part of Upgrade Express.

### Resolution:

All versions of Aleph have "master" as the default login for accessing the USM01, USM50, etc., demo data, with "master" as the password also.

The USR00 is hard-coded to be used as the password library when you connect to USMnn. Your aleph\_start pw\_library is \*not\* used in this case.
