Question

Configured start page of Opac is find-b but Opac opens with login page (Redirect) when you had already logged in on the same PC. How to avoid this?

Answer

It's not possible to combine „Redirect“ and „find-b“. You have to determine whether you want to use

- „Redirect“ which always displays the Login Page automatically
- „find-b“ directs to “find-b” page and Login Page is only displayed when you click „Login“ button
